SUMMARY

Hands-on engineering leader with 10+ years across fintech, HR tech, and healthcare, driving AI-native engineering transformation through developer experience, internal platforms, shared standards, and mentoring. Leads change across teams by setting technical direction and still architecting and shipping the systems.

EMPLOYMENT

Imagile

Founder & Principal Consultant · November 2026 – Present

– Helping engineering teams go AI-native with Claude Code and Codex — platforms, standards, and hands-on coaching.

– Building Toil, a JSON CLI and MCP server that gives coding agents scoped access to GitHub, Azure DevOps, and Jira.

Verifiable

Staff Software Engineer · Developer Experience Guild Leader · August 2025 – October 2026

– Led the Developer Experience Guild through the shift to AI-native engineering, coaching teams on Claude Code and Codex and setting the guardrails that made AI-assisted development safe at team scale.

– Reduced PR review cycle time by 30+ minutes per pull request with an AI-assisted code review workflow in GitHub Actions, standardizing review and CI/CD practice across the org.

Arcoro

Principal Software Engineer · July 2021 – August 2025 · Scottsdale, AZ

– Pioneered Arcoro Hub — now the company's central product platform — a technical vision to scale 10x using .NET, Blazor Hybrid WASM, .NET MAUI, and containerization, with a live synchronization bridge to legacy applications.

– Tripled feature delivery speed across all product teams by creating a new SPA and API for ExakTime, enabling development in Angular and .NET while preserving a seamless experience for existing users.

– Stabilized then rewrote a bug-ridden event-driven architecture using Azure Event Hubs, Functions, and Storage — improving performance by 98%, maximizing observability, and stopping customer data loss.

– Led transition to in-memory SQLite EF Core integration tests, executing the regression suite 95+% faster than Selenium end-to-end tests and encouraging TDD across the team.

PNC Bank

Principal Software Engineer · August 2016 – July 2021 · Pittsburgh, PA

– Modernized institutional asset management offerings by leading rewrites of two legacy systems into .NET applications handling millions of dollars per hour — improving performance by 86+% and remediating hundreds of vulnerabilities to pass internal audit.

– Increased QA deployment frequency from once per month to once per commit (4+ per day) by building CI/CD pipelines with Azure DevOps and IBM UrbanCode Deploy.

– Coordinated multiple teams over a year to implement Ping Identity across four applications, delivering a more secure and seamless login experience that passed internal audit.

– Mentored a developer with a focus on code quality and simplicity — who now leads a team of 7 on the same applications.

SKILLS

C# · .NET 10 · .NET Framework · Blazor (Server and WASM) · TypeScript · Angular · Azure AI Foundry

CI/CD: ARM/Bicep · Terraform · Azure DevOps · GitHub Actions · AWS Bedrock · AWS Lambda · AWS ECS · Docker · Azure CLI

MS-SQL · PostgreSQL · Azure Cosmos DB · Azure Synapse · Kusto
